

5. Visualizing Data in R

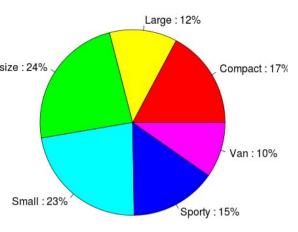

Plotting Data

Plotting is another way to explore a dataset, visually:

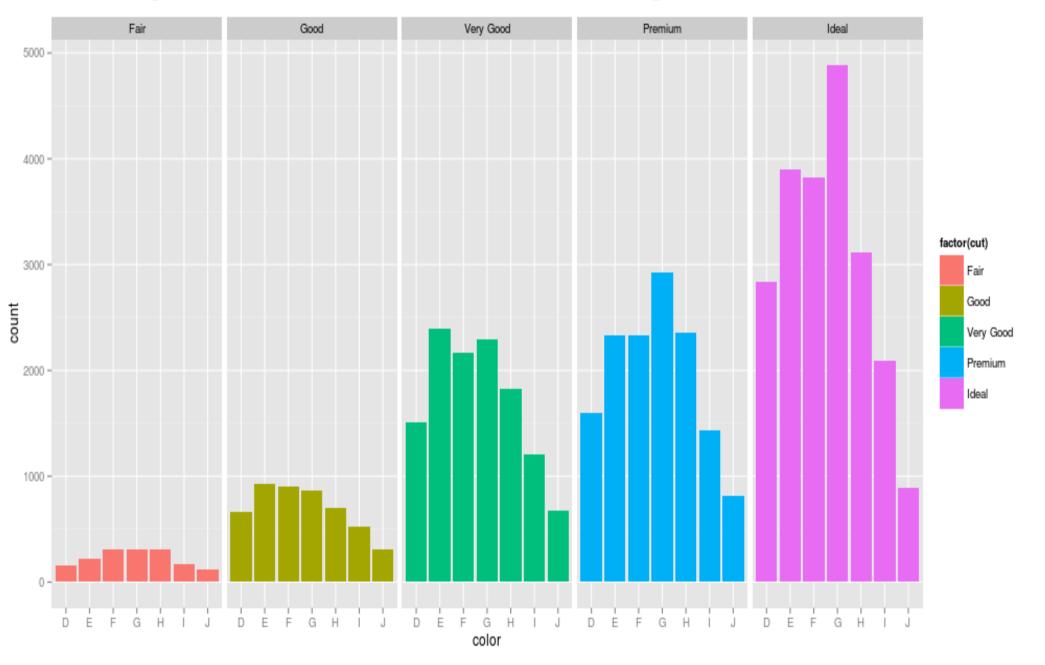

- What's in the dataset?
- What does it mean?
- What if there's a lot of it?

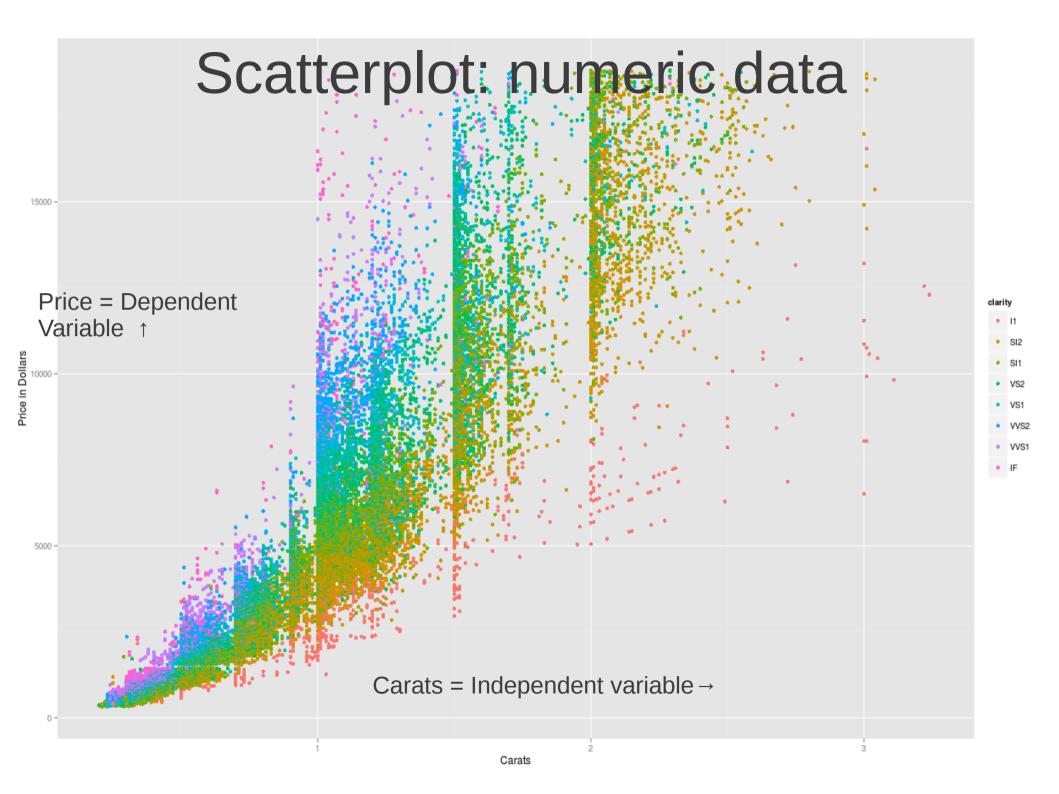

Some Plot Types

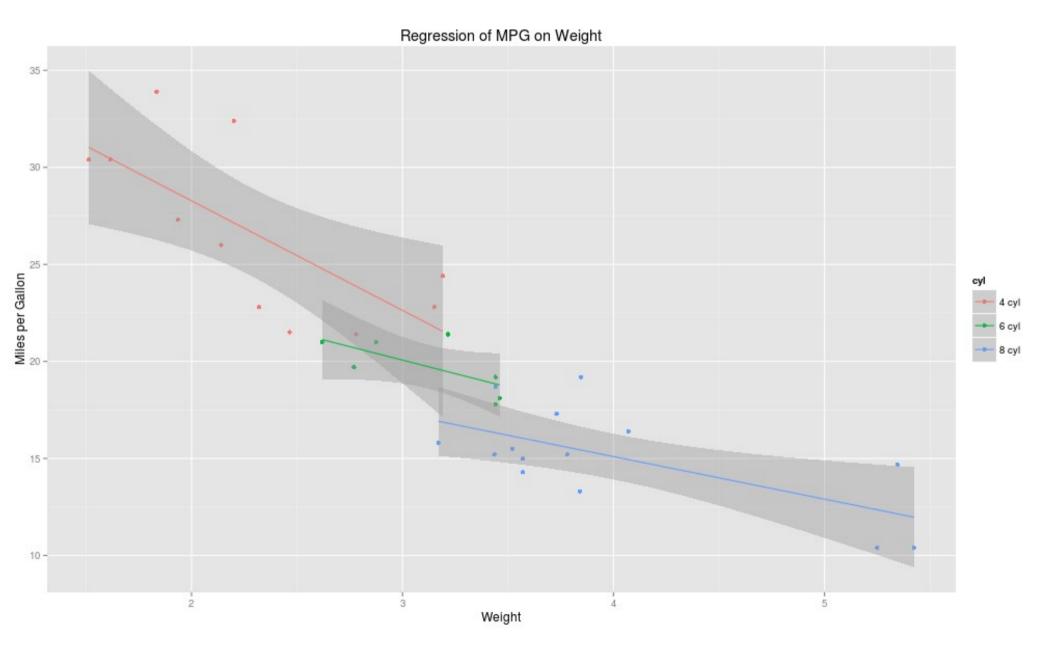

- Pie Chart
 - Display proportions of different values for a variable
- Bar Plot
 - Display counts of values for a categorical variable
- Histogram, Density Plot
 - Display counts of values for a binned, numeric variable
- Scatter Plot
 - y vs. x
- Box Plot
 - Display distributions over different values of a variable

Barplot: counts of categorical values

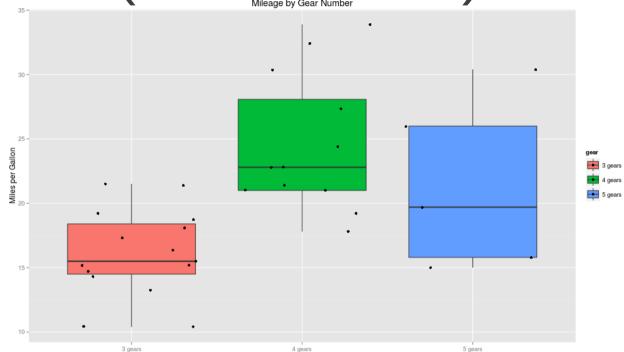

Scatterplot with Regression Lines

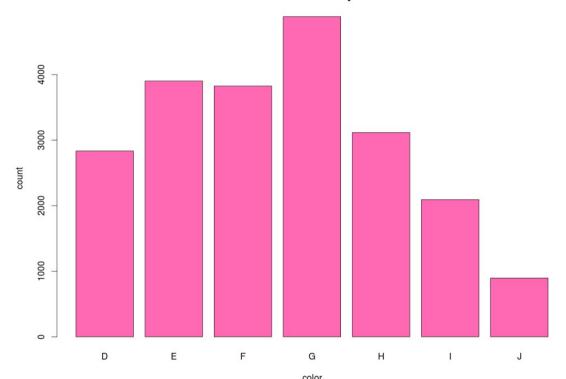

Box (and Whisker) Plot

- The box extends from Q1 to Q3
- The *median*, Q2, is marked inside the box
- The whiskers extend to the min and max
 - Whiskers: required to lie within 1.5×(IQR)
 - Outliers: beyond 1.5×(IQR)

Barplot: counts of categorical values

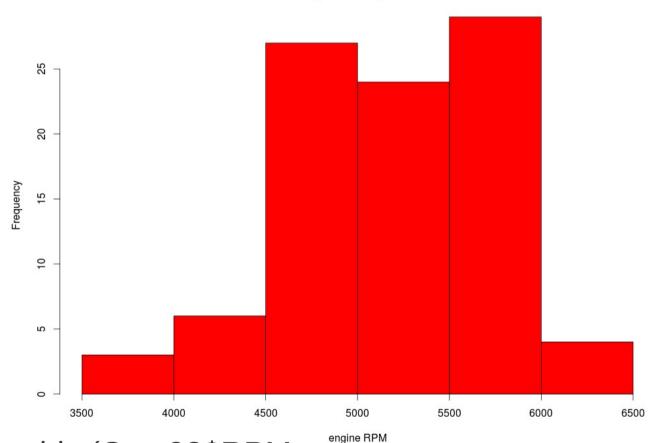

Ideal cut diamonds by Color

ideal=diamonds[diamonds\$cut=="Ideal","color"]

Histogram: frequencies of numeric values

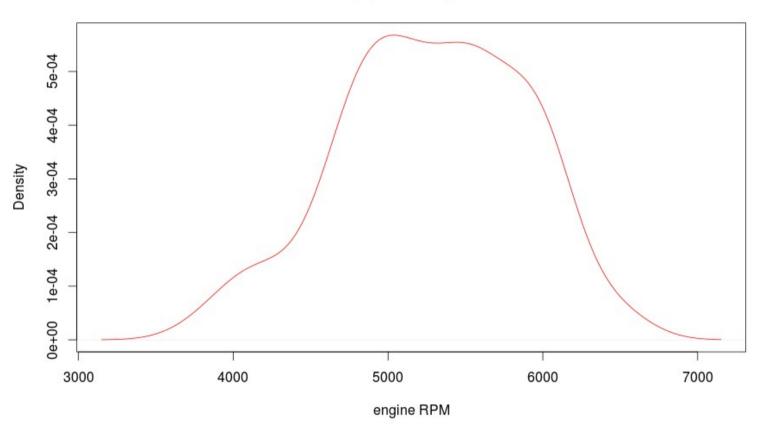

histogram of engine RPM

hist(Cars93\$RPM, xlab="engine RPM", main="histogram of engine RPM", col="red")

Kernel Density Plot

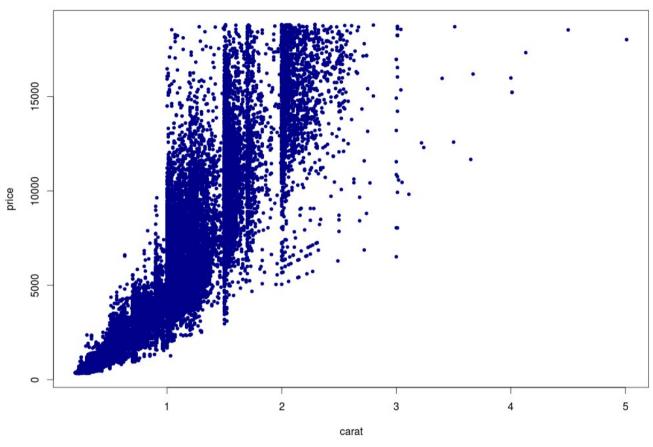

density plot of engine RPM

plot(density(Cars93\$RPM), xlab="engine RPM", main="density plot of engine RPM", col="red")

Scatterplot: numeric data, y vs. x

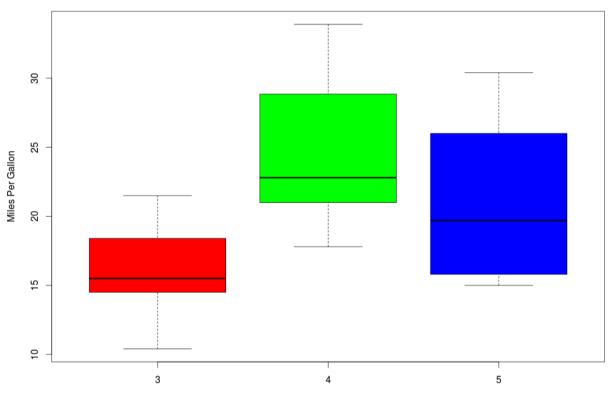

plot(formula=price~carat, data=diamonds, col="darkblue", pch=20, main="Diamond Price with Size")

Box (and Whisker) Plot

Mileage by Gear Number

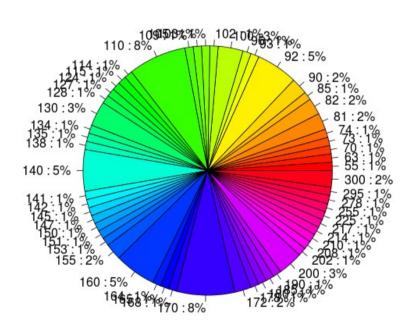

boxplot(formula=mpg~gear, data=mtcars, main="Mileage by Gear Number", xlab="Number of Gears", ylab="Miles Per Gallon", col=c("red","green","blue"))

Approach to Plotting

- Remember, you're getting to know your data.
- Don't be afraid to tinker and play.
- Sometimes the outcomes are silly (make sure you learn something!)

Horsepower in Cars93 Dataset

pie(table(Cars93\$Horsepower))

Interlude

Complete plotting exercises.

Open in the RStudio source editor:

workshop/exercises/exercises-plotting-basic.R

If you want to experiment further with R and RStudio, you can install them on your favorite operating system at home.

First, install R:

http://cran.r-project.org/

Then, install the Rstudio IDE:

http://www.rstudio.com/ide/
